AUTHORS: Rákoš, M. and Tarabčáková, E.

TITLE: The influence of crystalline and free water on the magnetic susceptibility of slightly magnetic materials

PERIODICAL: Československý časopis pro fiziku, no.1, 1962, 23-34

TEXT: The influence is investigated of the crystallizing and free water on the magnetic susceptibility of paramagnetic and diamagnetic materials which crystallize with a certain number of water molecules. The authors report on measurements of magnetic susceptibility of aqueous solutions of $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$, $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$, $\text{CaCl}_2 \cdot 6\text{H}_2\text{O}$ which are represented by a broken line of three sections, an unbroken line and a curve in that order and offers an explanation for the found behaviour. The authors recall that Wiedeman (1868) and Königsberger (1899) observed the discrepancy which exists between the measured magnetic susceptibility of salts in solution and the value calculated from the susceptibility of the crystalline material and survey some of the

Card 1/3

The influence of crystalline ... Z/037/62/000/001/003/007

work which was carried out since. Particularly work by G. I. Kruglyakova (Doklady AN SSSR 193, 1958, 443) is considered and extended to a diamagnetic material not so far investigated. The water content was 0 to 100%. Specimens with low water content were obtained both by moistening and drying - identical results being obtained in both cases. The measurements were mostly made with a Curie-Chévenau torsion balance, by a relative method against distilled water, assuming for the latter $-0.72 \cdot 10^{-6}$ CGSM units. In comparison with Kruglyakova's value of $115 \cdot 10^{-6}$ for CoCl_2 , the authors find $91 \cdot 10^{-6}$ CGSM units; however, in the region of 45% H_2O content, identical values were obtained. The experimental results show that there are three regions of dependence of magnetic susceptibility on water content, namely, a region given by the waterfree and still crystalline material, the region between crystalline material and saturated solution and the region of diluted solution. For paramagnetic materials such a dependence will give either a straight line in any of the regions - the lines being joined at the limit of the

Card 2/3

The influence of crystalline ...

E197/E535

region - or an unbroken line for all concentrations. A curve was determined for the diamagnetic material CaCl_2 . The Wiedeman formula is applicable to any of the sections. The authors believe that the reason for change in the slope of the line in the three regions is due to a change in the potential energy of the ions in the intercrystalline field, the cause of the curvature in the case of CaCl_2 is ascribed to the deformation of the electron shell of the ions in the lattice of the crystal. There are 5 figures.

AUTHORS: Kuruts, I.Yu., Tarabiy, M.I., Shkoda-Ul'yanov, V.A.

TITLE: The influence exerted by the width of the resonance range on the total cross sections of γ n-reactions determined by the method of thick specimens

SOURCE: Uzhgorod. Universitet. Nekotoryye problemy sovremennoy fiziki yadra i elementarnykh chastits; sbornik statey, no. 1, 1957, '73 - 73

TEXT: The procedure suggested previously (V.A. Shkoda-Ul'yanov. Nauchnyye zapiski Uzhgorodskogo Gosudarstvennogo universiteta, v. 18, 1956; B.I. Gol'danskiy and V.A. Shkoda-Ul'yanov. ZhETF, 623, 1955) for determining the total cross sections of γ n-reactions in thick specimens by the photon difference method is based on the assumption that the resonance range characterizing the excitation function of the γ n-reaction is narrow enough so that for $E = E_p$ the factor

$$\frac{1}{\sigma_{abs}(E) E} \left[1 - \frac{\gamma(\epsilon)}{f(0)} \right]$$

Card 1/2

The influence exerted by the width of

S/881/57/000/001/007/013
A066/A126

is equal to the value at which $\sigma_{\gamma n}(E)$ reaches a maximum, and remains constant in the determination of the maximum photoneutron yield. This assumption, which is based on equations of the above papers, is proved to be justified. Photoneutron yields are calculated for Al, Cu, Pb, and for a maximum bremsstrahlung energy of 250 Mev. The results obtained here prove the applicability of the method proposed by the two above-mentioned authors. There are 3 tables.

"Effect of Corn Forage Cultivated Together with Soybean on Milk Production in Cattle"

Bucharest, Revista de Ştiinţe şi Medicină Veterinară, Vol 16, No. 6, June 1966; pp 42-47

Abstract: [English summary modified] Field experiment with 55 cows reveals that corn with soybeans cultivated together for cattle feed is much more efficient from the standpoint of milk production than is corn alone. In cows producing an average of 14 liters of milk per day, mixed feed increased production up to about 13%. 3 tables, 5 Rumanian references.

 TITLE : The Use of Tagged Atoms in Studying the Mycotrophy of Woody Plants
 ORIG. PUB. : Nauchno-tekhn. inform. Mosk. lesotekhn. in-ta, 1957, No. 25, 24-31
 ABSTRACT : Using tagged atoms, the activeness of the uptake of mineral matter from the soil by oak with and without mycorrhiza was determined. The oak seedlings were grown in glass vessels by the method of sand cultures on Pryanishnikov nutrient mixture. The activeness of absorption of mineral substances was judged by the radioactivity of the leaves of the experimental plants. It was shown that the activity of leaves on oaks with mycorrhiza is considerably greater than on oaks without mycorrhiza. Analogous data were obtained also when the roots were studied. The mycorrhizal fungi not only absorb P but transmit it to the host plant. Radio-

TITLE: Radioactive "Marks" in the Forest (Radioaktivnyye "Metki" v Lesu)

PERIODICAL: Nauka i Zhizn²⁴ - April 1957, # 4, pp 47-48 (USSR)

ABSTRACT: This article deals with the use of radioactive chemicals in order to better trace the interaction between plants and trees in forests. As the USSR abounds in huge forests, numerous scientific establishments are busy developing new methods of cultivating them and protecting them from destruction. The method of using radioactive phosphorus for nourishing young trees more quickly and thoroughly when mushrooms grew in their vicinity than without them, the mushrooms thus helping the trees. Nourishing a couple of trees with a radioactive substance revealed that whole groups of trees showed the same element, which led to the conclusion that forest trees are connected among themselves by an intricate root system. It is suggested that radioactive tracers be used for finding out more details about forest vermin to enable their destruction in the most efficient way.

TITLE: Calculation of axisymmetric flow in an axial-flow turbomachine stage

SOURCE: Energomashinostroyeniye, no. 9, 1964, 15-18

TOPIC TAGS: turbomachine, turbocompressor, axial flow turbocompressor,
axisymmetric flow

ABSTRACT: Methods of axisymmetric-flow calculation are set forth, and the results of a calculation of the flow in a long-blade compressor stage are compared with experimental data. The aerodynamic equations are solved by a difference method that differs from other well-known methods by the following peculiarities: (1) The basic set of equations is solved, not transformed and reduced to one equation; (2) The central differences are used; (3) Sliding

Card 1/2

ACCESSION NR: AP4045907

successive approximations are used in solving nonlinear equations by the method of straight lines; (4) It is assumed that the energy loss varies linearly over the z-axis sections; (5) A solution of the constant-flow equation is presented as approximate finite formulas. The axisymmetric flow was calculated for a stage of an experimental axial-flow compressor having $D_{av}/l = 3$, a theoretical pressure of 0, 4, and a reaction step at an average radius of 0.5. The estimated results were found to be in fairly good agreement with experimental data for the middle part of the blade. "The flow was calculated by Engineers S. Sh. Avvakumova and G. G. Soboleva. The stage was developed by Candidate of Technical Sciences M. M. Babkova." Orig. art. has: 5 figures and 29 formulas.

REPORT: TECHNICAL CONFERENCE ON SHIPBOARD AIR-CONDITIONING -- Leningrad, September, 10-12, 1959, (pp 104-107)

In June 1959, a scientific-technical conference concerned with shipboard air conditioning was held in Leningrad. It was organized by the Shipbuilding Directorate, the Shipbuilding Scientific and Technical Society (SNTS) of the Shipbuilding (Engineering) Industry, and the Council of the Scientific and Technical Society (SNTS) of the Shipbuilding (Engineering) Industry.

Representatives of 130 plants, designing bureaus, and educational institutions took part in the conference.

In the opening address, "The Present Situation and Development Plans of Shipboard Air Conditioning," Soviet V. N. Buzin delineated the main tasks of the conference as follows: the exchange of information about and the solution to the problems in the field of planning, testing, and operating air-conditioning systems on maritime and river ships; the critical evaluation of existing work; the problems of operating systems; research into the problem of the rational use of air; and the automation of air-conditioning systems.

Reports read and discussed at the conference included: "Modern Techniques in Shipboard Air Conditioning" by Soviet I. V. Turbina, Capt.

Sov. Sci.; "Problems of Processing the Solid Air on Maritime Freight Carriers" by V. P. Trus, Maj.; "The Present Situation of and Development Plans for Air Conditioning in Ships" by Professor V. P. Kuznetsov, Sr. Tech. Sci.;

"Present Shipboard Air-Conditioning Techniques in Poland" by A. J. Mijajewski, Maj.; "Refrigerating Machinery for Shipboard Air-Conditioning Systems"

by V. D. Buzov, Maj.; "Using High-Pressure Systems for Shipboard Air Conditioning" by V. V. Lashov, Capt. Tech. Sci.; "Long-Range Development Plans for Shipboard Refrigerating Machinery in the USSR During the 1959-1965

Seven-Year Plan" by V. V. Pavlov, Maj.; "The Production of Shipboard Refrigeration Equipment at the Enterprise Plant" by A. S. Gerasimov, Maj.,

"Planning and Operating the First Domestically Produced Air-Conditioning Equipment on River Ships" by V. O. Sumin, Maj.; "The Air-Conditioning System on Board the Sea-going W. P. Poliss Maritime" by V. I. Zhurav, Maj.; and "The High-Pressure System of Comfortable Air-Conditioning on

Board the Maritime Dry-Cargo Vessel Leningrad" by V. P. Ryboshapka, Maj.

Title : Changes in the Quality of Eggs in Young Hens According to Age and Season (Vozrastnyye i sezonnyye izmeneniya kachestv yaits kur-molodok)

Orig Pub: Ptitsevodstvo, 1957, No 7, 38-40

Abstract: The quality of eggs of the young hens of the Russian White breed and that of the Moscow breed group were compared. The correlation of the component parts of the eggs in connection with the age of young hens, the seasonal changes of the yolk index and the amount of compact albumen in the eggs, as well as the chemical composition of eggs of the young hens in the different seasons of the year, were investigated.

TITLE: Ferrite-transistor pulse shaper with combined feedbacks.
Class 42, No. 184518 [announced by Leningrad Polytechnical Institute
in. M. I. Kalinin (Leningradskiy politekhnicheskii institut)]

SOURCE: Izobret prom obraz tov zn, no. 15, 1966, 109-110

TOPIC TAGS: shaper, pulse shaper

ABSTRACT: A ferrite-transistor pulse shaper with combined current and voltage feedbacks is introduced. The shaper consists of a transistor, a transformer with a square-loop core containing write, priming, feedback, and base windings, and a resistance connected between the base and emitter of the transistor (see Fig. 1). To obtain the required functional dependence of the pulse width on the amplitude, to compensate for the effect of the parameter spread on pulse width, and to increase
